

STYLUS RECOGNITION

Integritouch® also has the possibility to recognize given styluses. For example, a touchscreen in a operating theatre or industrial environment a hand with protective gloves is used (A). A second example, to make a secure and safe money transfer, Integritouch will detect that a specific pencil (B) is being used.

As Integritouch® works behind a protective glass panel it can be used in areas where aspects such as hygiene and vandalism are important.
